My laptop has been passed around and finally ended up with me. As such, it has numerous profiles on the machine.

How can I find out where my personal folders .pst is located ? (There are a few .pst's hanging around on my machine).

Can I use Outlook to change the location of it ? I want to start keeping all my "data" files on my d: drive, so I want to move it from my C: drive to my D: drive

I have outlook 200 sp-3 (internet mail only).

Thanks,  
Mike
