My boss' boss came to me w/ an issue today. When he replies to an email where the sender is using "Blank" stationary (HTML format), his signature appears in very faint yellow and double-spaced.

His client is set to "Always use my fonts".

This has occurred replying to three different senders who use the blank stationary.

I have put his sig file on my machine and replied to a message sent with the same stationary, it worked fine.

I compared the HTML source to my own signature and saw nothing that would explain the issue.

If you would like to email me, please do so to tom d0t young at tekelec d0t com

Thanks
