I want my new address to be the default from address. And I am running two internet email accounts, the new one which I want to be my sent from, so it needs to be the default. Is there a way to make it default while running in CW mode or do I have to install as Internet mode to make it default and then convert back.

I run in CW mode so that my Contacts Address book will show more than one email address per person and can be arranged by last name.

Thanks much, George
