Check out the excellent white paper "Configuring Outlook Profiles by Using a PRF File" at http://office.microsoft.com/search/redirect.aspx?assetid=HA011403051033&QueryID=pHm7c_60I&respos=3

Do you have any reference links that can show me how to do this?

Thanks. I've been stuck on this problem for months.

One solution is to use the CIW or CMW to create another .prf file and just export it; don't include it in the .mst or cmw file. In this one, you'll want to set it to modify the existing profile, not create an Exchange account, and add the Outlook Address Book. You can deploy that ...prf file as an additional file with the CIW installation, post in on your intranet, etc. and tell users to run it if they have problems getting their Contacts to show up in the Outlook Address Book.

Re: AIP missing Outlook Address Book

I setup an administrative installation point for Microsoft Office 2003 Pro. Everything works fine until I realized that Outlook Address Book is not installed by default. When a user logs on, he will have to manually add the OAB. Is there a way I can configure the AIP to add the OAB?

Thanks.
