- 1) Baseline = SNAFU, however Office working ok
- 2) Update Canon Dig Cam Software
- 3) MS Outlook will not load – missing sku111.cab
- 4) back to earlier restore pt – old version of camera software:( needs to be installed but MS Outlook is ok

FINE

to run updated Canon software I need to resolve the missing sku111.cab problem. Machine is Toshiba, media edition xp – factory install of software. Only disks I have are Recovery or Update. I am unable to locate B21654A.exe where this file is residing on either disk.

MS offers 3 ways to workaround/resolve the missing file but they all presuppose the victim having a full Office disk, even in the LIS tool procedure, all found in related article:

<http://support.microsoft.com/default.aspx?scid=kb:en-us:875556>

Folders view allows all hidden files to be seen and to show all extensions.

The original LIS may have3 been killed somewhere in the past as I am unable to find it. In that link above a claim is made to have parts I need in the

—— "Note Toshiba provides a compressed image of the OneNote CD on the "Toshiba Recovery and Applications / Drivers" DVD that is located in the following folder:

CDROM Drive\COMPS\MICROSOFT OFFICE ONENOTE 2003\MANUAL"

Is there something preventing me viewing the whole disk? I explore it seeking the file...no can find boss...and of course when the request is made to proffer up the original source data you cannot point to the whole CD and say find it yourself for it asks you to find it, which I am not able to do.

I'm dizzy enough for all of us...sorry about the length of commentary...this is day two of David takes 5 minutes to upgrade camera software:)

David
