BCM doesn't support what you want to do.

Hi. I am using Outlook 2007.

I created a custom form in My Contacts that I would like to use in my Business Contacts within the Business Contact Manager. The form is published to my personal forms library. When I attempt to set this custom form as the default form for my Business Contacts, I get the following error:

'Could not complete the operation because the service provider does not support it.'

Is there any way around this? Thanks.
