Do you have any more detailed information on the design of your add-in? The main things to check are whether you have the proper registry keys and that your add-in is registered.

Also, for .NET you need to ensure that .NET programmability support (the Office PIA's) are installed via Office setup.

See these links for more info:

Information about designing Office XP add-ins and Office 2003 add-ins by using the .NET Framework:

<http://support.microsoft.com/?id=840585>

Developing COM Add-ins for Microsoft Outlook:

<http://www.outlookcode.com/d/comaddins.htm>
