Hi,

I suppose you didn't understand me. What I wrote is a description of what a macro could do, because there is no way for adding multiple items' sender addresses to the junk list directly.

Once, you've written the macro, you'd only need to select your items and hit the button. The rest should be done by the macro. That is, it has to be written first...

For all methods you can find easily code samples in the VBA help, here are some keywords and code snippets:

1) Folders.Add

3-6)

Dim obj as Object

Dim YourFolderWithSelectedItems as Outlook.MapiFolder

Dim YourTemporaryFolder as Outlook.MapiFolder

' Your code: Set the references to the folders here

' Make the temporary folder the current one:

Set Application.ActiveExplorer.CurrentFolder = YourTemporaryFolder

For Each obj in YourFolderWithSelectedItems.Items

obj.Copy YourTemporaryFolder

' Your code: Use the CommandBar technics now

obj.Delete

--

Viele Grüße

Michael Bauer
