Hi Michael,

sorry for the late answer but my PC had some problems during the last days
:-(
First thank you very much for the hint.

Now I get always the Display Name "Outlook" instead of
Mustermann, E. (E.Mustermann@gmx)

A record in my text file looks like this:
E.Mustermann@xxxxxx; Mustermann, Elke (E.Mustermann@xxxxxx)

Do you have an idea?

Thanks
Kerstin
