I am running an IMAP server and am wanting to move sent emails to the "Sent" folder on the IMAP server.

I have it currently set up as a rule but want to change to VB as the rule turns itself off from time to time for unknown reasons. I have the rule set up on three computers and it turns off on each computer from time to time.

I have added the following sub in "Microsoft Office Outlook Objects" "Thisoutlooksession"
Initially, I thought I would just get it to move the sent emails to the Inbox.

```
Private Sub olSentItems_ItemAdd(ByVal Item As Object)
Item.Move
Application.GetNamespace("MAPI").GetDefaultFolder (olFolderInbox)
End Sub
```

The sent emails are not moved to either the Personal Folders Inbox or the Inbox on the IMAP server. I have tried it with "Saves copies Of messages In Sent Items folder" checked and unchecked and also with the rule off.

I would appreciate any advice.

Thanks,

—
