Thanks for the reply. Where would I place it in the code and what would I take out? I am sorry, I don't know anything about vb scripting.

To answer your question, the original script is going to be deployed through active directory so that I could put reminders for timesheets and expense reports on everyones calendar. I need the code to delete it just in case HR changes a date on me! Thanks for your help.

Phil

```
objEvents.Delete
```

Why would you want to delete the appointment your code just created?

I have this sample script that I modified from here:
<http://www.microsoft.com/technet/scriptcenter/resources/officetips/sept05/tips0929.msp>

The modified script is below. It works fine, but what I need to know is how to change the code to delete the items it created. Thanks!

```
Const olFolderCalendar = 9  
Const olAppointmentItem = 1  
  
Set objOutlook = CreateObject("Outlook.Application")
```

Re: Script to Delete Calendar Entry

```
Set objNamespace = objOutlook.GetNamespace("MAPI")  
Set objCalendar = objNamespace.GetDefaultFolder(olFolderCalendar)
```

```
Set objDictionary = CreateObject("Scripting.Dictionary")  
objDictionary.Add "January 18, 2007", "Time Sheets Due"  
objDictionary.Add "January 31, 2007", "Time Sheets Due"
```

```
colKeys = objDictionary.Keys
```

```
For Each strKey in colKeys  
    dtmEventsDate = strKey  
    strEventsName = objDictionary.Item(strKey)
```

```
Set objEvents = objOutlook.CreateItem(olAppointmentItem)  
objEvents.Subject = strEventsName  
objEvents.Start = dtmEventsDate & " 9:00 AM"  
objEvents.End = dtmEventsDate & " 9:00 AM"  
objEvents.AllDayEvent = False  
objEvents.ReminderSet = True  
objEvents.ReminderMinutesBeforeStart = 300  
objEvents.BusyStatus = Free  
objEvents.Save  
Next
```
