I use Access 2003 to link to Outlook Calendar. The fields I can read for example are "Subject", "Sender Name", ... But I want to get the "Start time" and "End time" so I can build a database to record the schedule for the events on my group calendar. I don't want to create my own group forms as we use the same MS calendar form for different groups. Is there any way I can get to these information?

Your ideas are appreciated.

Thanks,
Henry
