Error Number: 0x800CCC0E was the error message I received when attempting to send receivemail, and could not receive, but I think mail was able to be sent...

BY creating a NEW identity within my Outlook mail program I was able to circumvent this error...

This was a suggested approach here in this forum somewhere, and it worked for me...

However I also disabled my email scanning(an additonal level beyond auto, in Norton, this was also suggested here.) JUst disabling the email scan did not solve my problem.

New Identity avoids the error message and lets me receive mail from my earthlink server.... but darn if this is really SOLVING a problem.... Just a work around. I still want to know why this is happening.....

The following Technet article may give you a little more information.

OL: Error 0x800ccc0d or 0x800ccc0f When Receiving and Sending E-Mail:

news:E9CF9607-9264-4460-A264-53BEEE482FE1@microsoft.com...

Each time I download new e-mail, I get a Sending and Receiving error

reported (0X800CCC0F). "The conncection to the server was interrupted...

The server responded ???t?..." I am able to retrieve all my e-mail, but this message keeps coming up. Anyone able to help?

.
