I have Outlook Express 6.00.280 installed on Win NT 4.0 SP6 which is LAN connected to another PC that has Internet connection (Proxy server). Email account on my PC is POP3 for incoming mails and SMTP for outgoing. Now the problem is that I cannot receive emails but can only send them through this Proxy. Internet Explorer and all other applications that require Internet connection through proxy are working OK. The only problem I have is to receive emails. I setup the same account on another PC which has direct connection to the Internet through dialup and no problems for both sending and receiving emails.

This proxy server uses AnalogX freeware software called AnalogX Proxy. It supports both ports 110 and 25 for email transfer.

Any hint how to fix it?  
thanks
