I have tried and tried to set up Outlook but always get the following (paraphrased): "Setting up Welcome." When that goes away, it says, "Can't find server. Must be connected to Internet." Then, "Checking name." It just won't work. Any help would be appreciated. Thank you,

I suspect that you have an Exchnage account in the mail profile. With Outlook closed, use the Mail applet in Control Panel to check and, if there is one and you don't use Exchange, select it and remove it.
