And if within OL you use the Test Mail settings option (Accounts)
What error msg is given?

Brian:

Thanks for responding.
The steps from Verizon are:
Mail server settings–
Incoming mail server (POP3):incoming.verizon.net
Outgoing mail server (SMTP):outgoing.verizon.net
Your Verizon Online user name
Your Verizon Online Password

I have checked all of the above with Verizon's online email check and
received a message that everything was correct.

I am wondering if it isn't something else that I need to change/correct?
I'm not very savvy when it comes to the network settings.

As I said, I can send from Outlook but not receive. I get the messages I'm
sending myself by signing back into Verizon online and going to my email
there.

Thanks.

I have Verizon DSL. I've created an email account and
followed all
the steps to set up this account. I would like to use Outlook
2003
for my email rather than go to the 'net to use the account.

Re: unable to receive email in Outlook 2003

I have checked that I set up everything correctly. I can send email with Outlook with no problem, but the only way I seem able to receive email is to go to the Internet and sign on with Verizon. Any suggestions? I'd appreciate any help.

What are the steps Verizon told you to use?
