You have posted no solutions.
You never posted your problem clearly.
Your "titles" have no relevance.

You are welcome.

And just remember that you learned the solution from me. It worked and you did not even try. All thanks to eih27 for his helpful comment.

I will be happy to recommend a psychiatric to give you a change of attitude. Been an MVP and non paid volunteer have also the obligation of humility, helpfulness, providing the best advice your knowledge permit as well as admitting your ignorance if such is the case.

Rolando E Creagh, MD, AB, FACS, FICS, FRCS.

You might want to Google the meaning of the titles.
Cheers

I can't tell you how much we appreciate insults like yours. It just delights volunteers who on their own free time try to dissect through vague often indecipherable posts to try to figure out what symptoms the patient might actually be trying to convey. You were a model patient in that regard, despite my requests for more accurate information.

Let's see now. By your own admission, "I think our problem might be related to an entirely different area. The Users Accounts. As you, I have multiple email addresses, and all 8 of them were recorded in the 'Manage my network passwords' of my user account. I do not get messages in those."

Did you not think that information was relevant? Did you think we could read your mind? Only veterinarians can do that. Yet you blame the doctor for failing to make the diagnosis even though he had none of the relevant information he needed. Sadly, I'm used to that. You should be too. Thank you

I am relived that my paranoia is not unreal but actually justified. Thanks for the return and I agree with you 1000%. Your suggestions awaken some old ideas and I think our problem might be related to an entirely different area. The Users Accounts. First I noticed in my others computers that they were signed up to a .NET passport with my default email address and server and in doing so, they are also signed out to Windows Live. As you, I have multiple email addresses, and all 8 of them were recorded in the "Manage my network passwords" of my user account. I do not get messages in those.

So I added mi hotmail account, the default for this laptop, as my NET passport and SO FAR, SO GOOD.

You might want to try the same.

Hope that others with the same problem might find relieve, even as I am educating unhelpful and uncooperative MVP with close minds. I could have send this just to you, but others with the same problem might not benefit.

Cheers.

Re: Recurrent request for password

Re: Recurrent request for password

It is an issue with Outlook 2007 even though the "expert" on here swears it isn't. I have the same problem on a trial of Outlook 2007 on Win XP SP2 and it prompts me for password regularly regardless of account type(pop, imap, http). I have searched for months since I first tried Outlook 2007 and it did this so I went back to 2003. I love the interface of 2007 but I can't see paying money just to(there it went again asking for 10 different passwords so it is that often through out the day and it interrupts whatever else you're doing)enter passwords into all seperate accounts. If I wanted to do that I'd check them all through their individual interfaces instead of one nice all in one spot. Anyway I don't know how to fix it yet, I've done all the things suggested for this problem on all other versions of Outlook and none have fixed it so far. I think it may have something to do with the fact that 2007 is more or less intended for Vista and from what I've read it doesn't use the Protected Storage Reg key starting with "S" that you see in all the other post on MS and they want you to take permission of and delete. A couple things people say fixes it for them(not me unfortunately but maybe for you) are to take permission over that reg key and under advanced make it inherit parental permissions but don't delete it. That worked for one guy I came accross. Another guy said when he disabled the instant search it fixed it for him(do that in the tools trust center. Anyway it is a problem with Outlook and not your super oldschool Hotmail account. It does it with my old(one of the first like yours) and with new ones that I run through hotpop on a 127.0.0.1 proxy and every pop3 and

Re: Recurrent request for password

every imap and has NOTHING to do with hotmail. Hope one of the fixes I have found help you, as for me back to Outlook 2k3 again:(
