I'm having trouble getting PGP working with Outlook 2007:

PGP Desktop 9.62 trial

- does not decrypt earlier emails sent with GnuPG (converted from Thunderbird mailbox) even when pubring/secring are properly installed
- Very expensive (USD 188) for just email pgp, imho
- works as proxy - not as a plugin (my preference is plug-in for full offline/existing encrypted mails support)

G-Data Outlook plugin for GnuPG

- Can't get it to work at all with Outlook 2007 & GnuPG (hooks into Outlook 2007, but can't get it to handle key management and can't get it to decrypt/encrypt)

Hushmail for Outlook

- Requires yearly subscription from Hushmail
- Only works with Hushmail accounts?

Gpg4win

- Outlook plugin is beta (with big warnings, not good for important mails?)
- can't get it to work with encryption on Outlook 2007 anyway

Is there ANY working Outlook 2007 PGP implementation that just works and doesn't cost an arm and a leg?

I was very happy with Thunderbird + GnuPG + Enigmail.

Isn't there anything similar for Outlook 2007?

Baffled,
Matti Salonen

"A-LOCK" (for email) -- free for 56-bit encryption
\$29.00 for 448-bit encryption in North America, enables 5
registrations

Re: Help: Working PGP for Outlook 2007??

works on all email
