Haha! Just missed the previous post by Carl Wolz ... Looks like that's it! Only thing is that I had to add "Secure" to the GUID!!! Looks like I'm getting to the server now, just keep getting prompted for my username/password. Weird.

Sorry, I didn't see this. I just posted how to do this.

Recap.

FYI: Certchk.exe won't work on WindowsMobile 5.0. The layout of the registry has changed. In the devices registry [HKEY_CURRENT_USER\Software\Microsoft\ActiveSync\Partners\{GUID}] set "Secure" to 0. There may be more than one GUID under partners, so look at the "Server" to see where it is syncing.

This only bypasses the validation of the certificate on the device. You will still need a cert if you are syncing SSL
