Same issue here. MDA, Outlook 2003, AS 4.1 or 4.2b -- I've also only been able to sync on one of my two computers. This is really a pain -- to spend all that money for a Windows Mobile device, when the whole point is it's supposed to play well with the desktop OS.

Me too, darn it. T-Mobile MDA , Outlook 2003, AS 4.1 and also tried 4.2 beta.

I am syncing to a desktop. I get the server is busy error more frequently but I do get both of these. This worked fine for several weeks; now it's a constant battle. and I haven't installed anything on the desktop lately. None of the issues in the troubleshooting guide apply and/or I've tried them and they do not help.

Xp Pro SP2 is up to date, office 2003 is up to date, and I even tried 4.2 beta as others have mentioned.

Once in a blue moon a reboot of the PC helps, if I make sure nothing else is

running. I can't afford to reboot my desktop several times a day for this!

AS 3.x was rock solid by comparison,

I have exactly the same problem with the T-mobile MDA. I keep getting the '85010017' server is busy error. I tried removing Email from the synch and sometimes it works.

No concrete answer till now.
