Up until a few weeks ago I could sync my new Treo 700 just fine. Then is stopped working.

It would recognize the device, but just say "connecting...." and hang.

I reinstalled AS4.1 and now is recognizes the device, connects (after a minute or two) and waits about 5 minutes before complaining with a "Cannot Sync Device blah blah blah....Try reconnecting blah blah blah"

I've reconnected it, reset the device, rebooted the computer, etc. about 25 times in different combinations. I have no firewall, turned off sync of any "funky app" like Phatnotes, etc. Deleted the partnership, made a new one (5 times).... Using the sync cable, not bluetooth sync...

Any other ideas? Can't get to the 1.1 Treo ROM upgrade as it requires ActiveSync to be working.

Arrggghhhh

.
