Raj,

169.254.2.1 does not work on my network 192.168.0.1/254 and appears to be a self IP – it does not work with the local network. How can we say this is what WM5.0 is designed to work like that?

Scott

Scott,

Yes, thats the way WM 5.0 and AS 4.x version is designed to work.

With O2 Atom connected to pc using ActiveSync, there is Local Area Connection 3. It is 10 MHz speed and the ip is 169.254.2.2, subnet mask is 255.255.255.0 and the default gateway is 169.254.2.1. It is marked from DHCP server. What is this and where is the DHCP server? Is it working correctly?

Thanks,

Scott
