Hi,

Check the D-Link VPN client to see if you can configure it to support the use of other network connections simultaneously with the VPN client. This is usually called a split horizon.

I've proven that it's the DLink (DS-605) VPN client software. Without it, AS works just fine. As soon as I install it, AS says connecting, but eventually disconnects w/o syncing.

I talked to DELL and to DLINK. Neither had an answer. The latest MS release states that 4.2 is supposed to resolve VPN issues, but unfortunately, DLINK doesn't.

ANyone have a work-around (other than uninstalling my VPN software everytime I want to sync)?
