Any OS update is a significant thing (and there are a number of OEMs to consider, as they are actually the ones who would have to generate the right OS for their particular device, a process over which Microsoft has no real control). From the standpoint of requesting a change, probably complaining to the device vendor is as good as any other method of starting things. I would not expect a fix in the weeks to months time period, though.

I am glad to have independent confirmation of this.

This strikes me a severe and arbitrary limitation. How do we get Microsoft to respond and fix this. It also seems like it should be a relatively "easy" fix.

Hi,  
Wildcard certs are not supported on Windows Mobile devices. There is no workaround right now.

Has anyone solved or submitted to MS a request to have  
Wildcard certs  
work  
on
