I know that our P2P was ported from WinXP so the API set should be a subset, perhaps even %100 compatible. The MSDN docs would have more details.

As far as what 'optional server component' means, this I do not know. I know the packages (P2P, MSMQ, HTTPD, etc...) are all independently installable so I would think it wouldn't be this coarse of a description. Try searching through your visual studio install for peernet.cab or peernet.\* to see if you can find the raw file. That you can copy onto the device + install via the file explorer I believe.

Sorry I'm not of more help here. I'm a core networking guy, don't have a lot of experience from the SDK side of things. Also I'm on vacation and am only checking this sporadically so please don't be offended at a long response.

Thank you for your information

Just before I installed Windows Mobile 5.0 SDK. But it doesn't have P2P. Instead 'Optional server component' seems to have. Does this mobile P2P SDK support full set of XP P2P APIs? Otherwise, what are different?

Thank you

Scott
