We don't have a cradle to connect the device to the PC, so I'm not using the Desktop installer. I just copy the cab file to flash memory from my PC using a WiFi connection, and a Network share.

Is there any way of finding which Cabs are included in the Developer Redist ?

The program I have written in Visual Studio .Net creates several Cabs for different devices and I copy and install the file:

CarsPlusPPC_PPC.ARM

Which doesn't show the warning.

But when I install the files:

netcf.core.ppc3.ARM

sql.ppc3.arm

I get the warning that they may not be compatible.

Cheers

Robert
