Further to my last posting, some tedious experimentation has revealed that the

```
object.insertAdjacentHTML("BeforeBegin",stringtoinsert);
```

is what is causing my the javascript on Pocket IE to stop executing.

In my case object is the ID of a <p> element

e.g.

```
<p id="MARKER"> </p>
```

And then I have

```
MARKER.insertAdjacentHTML("BeforeBegin",stringtoinsert);
```

So is this command not supported or am I doing something wrong. If it is not supported how can I insert HTML into my webpage on Pocket IE.

Regards

Dave
