Hi!

Basically it looks like your "Include Directories" list is incomplete. One of the drawbacks of eVC is that it does not set those lists all that intelligently (one of the drawbacks of VS 2005 is that it won't tell me voluntarily how and why it set said lists) – so just try and check "Tools->Options->Directories" as well as yur INCLUDEDIRS.

Greetings,

Kerstin

Ok, a google search pulls up nothing. Basically, I just installed eVC++ 4.0, the PPC 2003 sdk, and SP4. Cannot get anything to build. If I create a new PPC 2003 simple CE app or hello world app then attempt to build, it will not work. I get the following error:

Compiling resources...

```
C:\Documents and Settings\Paul King\My Documents\Dev\HelloWorld\newres.h(32) : fatal error RC1015: cannot open include file 'winver.h'. Error executing rc.exe.
```

A google search pulls up many people asking this question, but no solutions. Can somebody please help?
