I have created a form which is I am filling from my programe in a loop with me.contrls
It looks like this

```
Public Sub autoFill(ByVal comboY As ComboBox)
Dim tname As String = comboY.Name
If comboY.SelectedItem.ToString = "No" Then
Dim control As Control
For Each control In ctrlGroup
If TypeOf (control) Is ComboBox Then
Dim combo As ComboBox = control
If combo.Name.Equals(tname) Then
combo.Enabled = False
Else
combo.Items.Add("N/A")
combo.SelectedItem = "N/A"
combo.Enabled = False
End If
End If

If TypeOf (control) Is TextBox Then
Dim txt As TextBox = control
txt.Text = "0"
txt.Enabled = False
End If
Next

End If
End Sub
```

where ctrlGroup is a collection of controls in a form
Now what happens is that when I call this function it starts filing the form and scrolls down that u see on the form and it takes nearly 15 sec to complete a loop. So you see it filling all the values on the form and creates screen flickers. what I don't want to see that flickering on the screen.
Is there any method I can call to stop this?

Any suggestion will be grt

Hi, flickering PDA screen with vb2005 in vs 2005

many thankx
