The link you originally posted ([http://en.wikipedia.org/wiki/QR\\_Code](http://en.wikipedia.org/wiki/QR_Code)) has a lot of links at the bottom about QR Codes. Some go right to sites with open-source libraries for reading and writing. If you're specifically for a Compact Framework library for QR Codes, I think you're out of luck, but with all of the source available in Perl, C and even Java, it should be easy enough to port one.

Thanks Simon,  
I will take a closer look on the Windows Mobile 5 SDK.

And about the QR Code reader ? Any tip ? I spend all day looking at the web for somethink and (for my surprise) dont find nothing.

Thanks again,

Marco A. (Gh0stman)

As the HP 6945 runs Windows Mobile 5, you could have a look at the sample  
C#  
GPS application that comes with the Windows Mobile 5 SDK.

I'm a C# programmer and new on the Compact Framework world, to develop I have a HP 6945 with GPS built in.

I just need build a program to start-up the GPS and stay send to a SQL 2005 database the X and Y where he is at the moment. I just dont know where to start.  
Is an API from HP ?! Or I can do this direct on the .NET Framework with C# ?

My other problem is how to read a QR Code (a.k.a. Denso Code – [http://en.wikipedia.org/wiki/QR\\_Code](http://en.wikipedia.org/wiki/QR_Code)).  
Does anyone know a component? Or how can I do this? How to start the camera?

Thanks
