Thank you Peter . I'll try with PhoneShowCallLog .

"Peter Foot [MVP]" wrote:

There isn't an API to do this. The PhoneShowCallLog method only allows you to filter by Incoming, Outgoing or Missed calls. For any more complicated filtering you'll just have to build your own form which looks the same as the regular Call Log application.

Peter

Hi Vijay ,  
Did you get any API to display the call logs as it is in WM 5.0 default behaviour ?  
Thanks in advance.

Hi Fabien,  
Thanx for the reply, but i think i am asking something else. I am able to use those PhoneAPIs to get the call logs. But my query was how to display those entries as they are shown by the WM 5.0 default behaviour.  
Like  
can i call any shell function to display those entries exactly

Re: How to open call log form through code??

as they  
are  
shown by the WM 5.0?

Hi,

I think you can use the phone API, check out  
this link:

I have developed a pocket  
pc 2005 application in  
C#, which basically  
search  
from the call log entries and  
shows those entries. Now i  
want to list  
down  
the certain calls e.g. i want  
to list down all the calls of a  
particular  
contact.  
My first query is that can i  
sort the call log entries by  
that  
parameter?  
Secondly if i am able to do  
that then can i display it like  
the same  
way WM  
5.0 shows it.(means  
standard call log display  
form)??  
Is there any shell API to do  
that??  
Please help.

Re: How to open call log form through code??

Thanx  
Vijay
