I download the httpd.exe , and build the web server!

It can parse HTML, but I would like to parse the asp script! when I put the .

asp file into the default folder, and input the "http://(ip address)/ *.asp",

it has some Error! The error message is:

Error in initialization of scripting engine:

The ASP or JScript or VBScript libraries were not properly installed on this device

Error = 0x800401f3

why? And what can I do?
