I have a today screen plugin app. It works well.
i have this in my init function.

case WM_PAINT:

```
.....  
//////////////////// FMC BUTTON  
hdcScreenBuffer = CreateCompatibleDC(hDC);  
GetClientRect(g_hWnd,&rcClient);  
// Load the bitmap from the resource  
hBitmap = LoadBitmap(g_hInst, MAKEINTRESOURCE(IDB_MY_BITMAP));  
// hBitmap = CreateBitmap(rcClient.right, rcClient.bottom,1,8,NULL);  
hBmpOld = (HBITMAP) SelectObject(hdcScreenBuffer,hBitmap);  
BitBlt(hDC,90,4,60,40,hdcScreenBuffer,0,0,SRCCOPY);  
DeleteObject(SelectObject(hdcScreenBuffer,hBmpOld));  
.....
```

Now i want to change hBitmap (IDB_MY_BITMAP) to IDB_MY_BITMAP2 if some
internal event appear.
How can i do that ?

.
