I had WM6.1 on my Mogul for a few days until I found out they changed the program called "Internet Sharing" so it doesn't *share* the Internet anymore.

What they did in WM6.1 with the program called "Internet Sharing" is remove the option for "Network Connection."

Before you could set "Network Connection" to say "Sprint PCS" and then have internet on the Mogul at the same time you had it on another device connected either via USB or Bluetooth PAN.

So my question is, is there anyway to move the "Internet Sharing" program from WM6 into WM6.1?

Thanks
