I have a Ipaq 2215 with a Dell Truemobile 1180 CF 802.11b WLAN card. Everything seems to be installed correctly on my PDA. The card lights up perfectly, see's the network, connects, give's me the signal strenght and looks fine. However, it doesn't connect to the internet. A program on my PDA that uses an internet connection to function works perfectly, but I cannot pull up any websites. It always says website cannot be found. Any tips?
