I have an Ipaq 3955 upgraded to Pocket PC 2003 and the PC Card Sleeve. Is there a driver ANYWHERE that will make the C201 card work again in the Ipaq?

The novatelwireless site has a 'beta driver link' for the C201, but it only downloads the driver for PPC 2002. This is ridiculous. Its been months since the OS was put on the market and PPC 2004 is around the corner.

Sprint doesn't have the answer \*surprise\* – and Novatel doesn't respond to emails.

How can I get this card to work in PPC 2003?

Thanks
