Answer to what? Are you calling me stupid???

My point was, since there seems to be a trend these days to make PPCs with only an SD slot, no CF slot, some people might not be aware that there are still new PPCs available with CF card slots, even if they are less common than the SD-only type. So that is something that purchasers of a new PPC really need to be aware of, and consider in deciding which PPC to purchase.

For instance—a CF slot seems to be important to you, yet you apparently bought a PPC without one. Were you aware that PPCs with CF card slots were available? (I guess if the PPC was given to you as a gift, that is a moot point.)

And———if manufacturers see that the units with CF card slots are selling better than those without, that might affect future models.
