Thinkpad R31 user here :)

i've had a bad time installing a Bluetooth CF adapter in my laptop, for a reason I still don't know.

I have gone through a few times uninstalling it and then reinstalling it, it's not the hardware that is giving trouble, it is Windows XP and the way it handles unsigned drivers. as far as I know, Bluetooth device drivers aren't officially signed yet...

what you could do is, if you have the IBM Update connector installed on your system, is to try that and see if IBM has newer Bluetooth drivers for your R40 system. (aside from the IBM IBII)

Also, check your R40's BIOS settings for possible Bluetooth settings, and Control Panel, and in Hardware Manager (properties of the BT device).

I'm not sure if you will find any settings for Bluetooth there but it's worth a try. Keep your devices at least 1 foot away from the laptop when you try searching for devices again, sometimes when you keep Bluetooth enabled devices too close to each other you put them in eachother's 'dead zone'.

hope this helps a little.. :)
