I've been trying to connect to my XP pro box with TS for quite some time and have yet to figure out how to get it to work correctly. I have an audiovox thera and would like to be able to check in with my box at home which is connected to via cable, when i'm out and about with clients so I can check in on stored files there. Is there any way I can get a "How to" that can step me though it. thanks
