Hi Guys,

My 9 months old iPaq 1935 ran perfectly until yesterday before refusing to start. The last thing he did was to respond to the alarm i set and died. I thought it ran out of power and i recharged for awhile and tried starting but nothing seems to happen. I just have to stare at a blank screen.

Any idea what could have gone wrong ? Battery ?? switch ? etc.

Thanks much for any inputs

Happy New Year!
