ok, I'll take your word for it.

Sorry, this doesn't make sense.

- > to be a problem when connecting from mobile devices.

Understood, make sure the gateway address for the vpn is in the vpn exception list on the mobile device.

Your qualifying logic on the previous statement is incorrect. "as I am able to use RD to connect from any remote PC to the servers" does not mean "The internal IP is on the exceptions list" for the mobile device. It means the vpn on the server is set up correctly on the server for a desktop, nothing else.
