The Resco keyboard utility at
<http://www.resco.net/pocketpc/keyboard/default.asp>
works well. There is a "canadian" (french-canadian) layout.

Hi, I just bought a Ipaq Hx2790 french running under WM5. I have changed the
the regional setting from French (standard) to French (Canada) but the
keyboard still display as Azerty instead of the standard Qwerty keyboard
used in Canada. Is there a file I could install or a registry tweak I could
apply to fix this simple but anoying problem?

Thanks in advance

Francois
