I use opera mini and it works great. normally you should download a java midlet to get these stuff working.

Papcina wrote:

okay guys

im quite nervous, it would seem an easy thing but I cant make it to work

I'm using Opera browser on my HTC Wizard 100 and I cant open any java based net chat such this <http://chat.net.hr/index.jsp>

(i can get through Public conditions but when i need to login i cant) also, i cant even run and play Yahoo online games such as pool or similar...

I tried using IE and Netfront on my PPC but i cant make it to work..

can anyone tell me how to open this java applets on my ppc?

thx

bb

ps-i have java manager on my ppc
