hallo,

thanks for your answer.

But if I'll install your datei on desktop pc or PDA The system tell it can't install, because Windows CE is not the OS (I have Windows Mobile 2. Edittion not Windows CE).

Have you any driver for Windows Mobile 2. Edition?

greetings

M. Kunz

fyi, your devices os software version is windows mobile 2003se and, you will probably have to find drivers specific to the os, and, I'm guessing they are findable although it seems both sandisk and socket have pulled the sd drivers from their sites.

That card originally shipped for Win mobile 2002 so the following from the installation cd might work, but don't know... it installs on the sync pc via activesync.
