Hello again:

I have 2 PWA users, members of the same security category.
(they have exactly the same permissions).

I have configured a view and I have granted access to
their category.

Projects have been published for both of them, but one
resource can't see any project at the project centre or
any resource at the resource centre.

Curiously this resource that can't have access to those
views is a project server only user, the other one is a
Windows authenticated user, both of them included in the
enterprise resource pool, and none of them is checked out.

Help please !
José
