Hello:

It's my understanding that all resources listed in my resource sheet view can view my project EVEN IF they are not assigned to any tasks. This is so that a wide audience can reference my schedules via PWA. I call these Audience Members (no real assignments.) I have created a template plan with multi resources just for this purpose. I have a master plan, created from this template, with a few inserted subprojects (read only).

An "audience member" (someone I intend to be able to view this plan) can open the master and only see the subprojects with the "-" (ie, cannot explode the project). What do we need to change? I thought about assigning the Audience to a single milestone task --but that would be a lot of folks.
