I had some issues saving my project out to the Project server database, and now for certain resources, the resource usage view shows work and actual work next to the resource name, but the grid to the right doesn't display anything. Even when I type a value in the grid, the work value next to the name is increased, but the grid to the right shows only blanks. This is not the case for all resources.

Other things I've found are that when I try to open the file, I get a circular relationship reference that doesn't exist when I look at the predecessors & successors.

Lastly, the WBS looks very messed up. For example, there are several tasks with the same WBS value (incidentally, none are the same as the task erroring with the circular relationship reference), and there are crazy WBS codes in there like 1589.-29688.1797.1

This plan is not that many tasks, but it has hundreds of resources assigned to it, and we've captured more than a month of actuals in it (i.e. I don't want to rebuild it from scratch).

Help!

Thanks.
