Kenneth,

I run Project 98, 2000 and 2003 under VPC 5.0.4 (Windows XP) on my eMac (G4) with OS 10.2.8. Response is of course not as snappy as a PC but performance is very acceptable and I do a lot of VBA macros, some quite complex. I do notice however that Project 2003 is more sluggish. I would assume VPC 7 on a G5 will improve that but I do not yet have VPC 7.

Hope this helps.

John
