Hi Julie,

Help -> About reveals:

Microsoft Office Project 2007 (12.0.6211.1000) SP1 MSO (12.0.6213.1000)

Stepping through the help topic works if I use a project which is not sharing a resource pool. However, when I apply the methodology to a my master project file, which has a shared resource pool as soon as I enter a budget type in step 4.4 in "Categorize resource costs according to their budget type" project crashes.

Cheers,

Mark

Hi Mark,

I've stepped through a fairly simple example following the steps outlined in the help topic. I have not had any crash problems.

I am using Project 2007 Professional with SP-1. What service pack are you working with?

Can you be more specific about where the crash occurs and any error messages you receive?

I hope this helps. Let us know how you get along.

Hi,

When implementing the Project 2007 help topic: "Create a budget for
your
project" on a collection of projects sharing a resource pool,
Project 2007
crashes when assigning budget types to a shared resource pool.

How can I work around this problem?

Cheers,

Mark
