You won't explode the internet by trying you know! :-)

FP admin is extremely misunderstood by a lot of hosts.

IF your site truly has FPSE installed (AND working) you should be able to Publish via the http method. TRY it FIRST – before resorting to ftp, because ftp WILL corrupt the extensions.

Good luck!...and post the URL so we can see it. If it doesn't work...welp...it's time for a new host.

| I am ready to take my web site off its test location at netfirms and install

| it on our earthlink web server. I have all the info I need from you guys --

| I think -- but the earthlink techs say the upload must be done in ftp. I insist that it can't be because of FPSE and possible corruption of files, particularly all-important forms. They simply say that http is for browing

| web sites only, not for uploading. I quoted them David Bartosik's clear instructions in that regard, and finally they gave up and saic call our 1-800

| number -- we can't address that issue. Has anyone run into this before? I'm

| tempted to simply go ahead and try to upload out of Publisher according to the very simple instructions. I'd prefer not having to talk to a perfectly

| nice and sincere person who is impossible to understand, so I'm delaying the

| phone call. But I'm going to have dinner and see if my Publisher gurus have

| a thought or two first. Thanks

.
